Create POST Endpoints

Get	Retrieve Data
Post	Create Data
Validate	Validate Input Data

Pydantic

Pydantic is a data validation library that uses Python type annotations to automatically validate, parse, and convert incoming data with clear error messages.

Demo: Model-wide Validation

Validate entire input model

Mode

Before	After
Validates raw input data	Validates converted data
Runs before type conversion	Runs after field validation
For preprocessing input	For cross-field validation
